

Ferhat Daoud

Full-Stack Developer — MERN / PERN

dunosixen@gmail.com | github.com/ferhatdaoud | [Live demo: TaskFlow](#) | Ksar El Boukhari, Algeria | +213 669 441 930

PROFESSIONAL SUMMARY

Self-taught Full-Stack Developer who has shipped and deployed a production-style MERN application — 50+ commits, 20+ RESTful endpoints, JWT-secured auth — in under a year of self-directed, project-based study. Comfortable across the stack: React and TanStack Query on the frontend, Node.js/Express and MongoDB on the backend. A background in food-quality-control brings a spec-driven, detail-first habit to testing and debugging. Seeking a Junior Full-Stack Developer role to keep building inside a team.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS

Frontend: React, TanStack Query, React Hook Form, Zod, Tailwind CSS, shadcn/ui, Responsive Design

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, bcrypt

Databases: MongoDB, Mongoose, PostgreSQL (fundamentals)

Tools: Git, GitHub, Vite, ESLint, npm

Currently learning: *Advanced SQL, Data Modeling, System Design Fundamentals*

PROJECTS

TaskFlow — Full-Stack Kanban Task Manager *(React, Node.js, Express, MongoDB, JWT)*

- Shipped a full-stack collaborative kanban app (50+ commits) with 20+ RESTful endpoints across four Mongoose data models — live and deployed on Vercel
- Implemented JWT authentication with httpOnly cookies and bcrypt hashing, keeping tokens out of reach of client-side scripts (XSS-resistant by design)
- Replaced manual state handling with TanStack Query, adding optimistic UI updates and automatic cache invalidation across every CRUD flow
- Built task reordering, archiving, and a comment system with live counts, validated end-to-end with React Hook Form and Zod schemas
- Designed a reusable component architecture (boards, cards, modals) with shadcn/ui and Tailwind CSS to keep the UI consistent as features grew

Craftsman Booking Marketplace — *In Progress* *(React, React Router, PostgreSQL, TypeORM)*

- Building a marketplace connecting service providers with clients for bookings, using React, React Router, and TanStack Query
- Designing a relational schema in PostgreSQL with TypeORM to model users, services, and bookings — deliberate practice with SQL and relational data modeling beyond the MongoDB stack above

EDUCATION

Self-Directed Full-Stack Web Development Training — *Ongoing*

MERN / PERN stack — React, Node.js, Express, MongoDB, PostgreSQL, JWT authentication, RESTful API design

Ongoing algorithmic practice via Codewars (JavaScript)
